## Cloud / DevOps Support Service Menu

Fixed-scope VPS and Docker support for founders and small teams. Focused on practical operations work, clear handover notes, and low-cost tooling.

| Package                              | Price   | Delivery    | Best fit                                                     | What is included                                                                          |
|--------------------------------------|---------|-------------|--------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>VPS Docker Rescue Audit</b>       | USD 79  | 24-48 hours | Founders or small teams with a broken Docker app on one VPS. | Logs, ports, disk, memory, DNS/HTTPS symptoms, one safe fix, incident report, next steps. |
| <b>Backup and Restore Safety Net</b> | USD 149 | 2-3 days    | Working VPS apps with no tested backup or restore proof.     | Backup workflow, checksum, safe restore test, cron example, recovery runbook.             |
| <b>Monitoring and Handover Setup</b> | USD 199 | 2-4 days    | Teams that only discover downtime from customers.            | Uptime Kuma or endpoint checks, first-response runbook, alert test, handover notes.       |

**Operating rules:** No passwords or private keys in chat. No open-ended retainers before a successful fixed-scope delivery. Every job should leave evidence: screenshots, notes, runbooks, or restore proof.
